

A8: Write a java Servlet program to Download a file and display it on the screen(A link has to be provided in HTML, when the link is clicked corresponding file has to be displayed on screen).

Index.html

```
<html>
  <body>
    <h1>File download</h1>
    <a href="FileDownload?fname=sample.txt&action=download">Link to Download File</a><br>
    <a href="FileDownload?fname=sample.txt&action=view">Link to view the File</a>
  </body>
</html>
```

FileDownload.java

```
public class FileDownload extends HttpServlet {
    protected void processRequest(HttpServletRequest request, HttpServletResponse response)
        throws ServletException, IOException {
        OutputStream out = response.getOutputStream();
        String fname=request.getParameter("fname");
        String action=request.getParameter("action");
        String path = getServletContext().getRealPath("/"+fname);
        File f=new File(path);
        if(f.exists()){
            if(action.equals("view"))
                response.setHeader("Content-Disposition", "inline;filename=sample.txt");
            else
                response.setHeader("Content-Disposition",
"attachment;filename=sample.txt");
            Files.copy(f.toPath(),out);
        }
        else
            response.getWriter().println("File not found!");
    }
}
```

In FileDownload.java write only highlighted code inside processRequest which will be always there while creating the servlet
